VZ 200/300
HUNTER VALLEY VZ JOURNAL

THIS PUBLICATION WAS PREPARED ON A STAR NX 1000 PRINTER USING DAVE MITCHELL'S PATCH3.3 TOGETHER WITH E & F WORD PROCESSOR. HI & LO-RES SCREEN DUMPS AND LISTINGS WERE DONE USING LARRY TAYLOR'S PRINTER PATCH V1.4 AVAILABLE FROM VSOFTWAREZ WHILE PATCH 3.3 IS AVAILABLE FROM HUNTER VALLEY VZ USERS' GROUP.

FRONT COVER - USUALLY I DON'T HAVE MUCH OF AN IDEA WHAT'S GOING ON THE COVER AND THIS ISSUE EVEN SURPRISED ME. SEE PAGE 13.

IF DECIMAL, BINARY & HEX LEAVE YOU A BIT CONFUSED THEN LARRY WILL CLEAR THINGS UP FOR YOU IN HIS EASY TO UNDERSTAND STYLE.

ONCE AGAIN BRIAN PRESENTS US WITH A USEFULL UTILITY WHICH WILL ALLOW YOU TO TRANSFER SOURCE CODE FILES FROM TAPE TO LASERLINK DISK BASED EDITOR ASSEBLER.

ANOTHER COUPLE CLEVER UTILITIES FROM DAVE WHICH WILL WHEN ENABLED LIST LINE NUMBER ADDRESSES IN DECIMAL AND IN HEX.

THIS VERY WELL PRESENTED AND DOCUMENTED UTILITY IS DESIGNED TO MOVE ANY HI-RES SCREEN FROM VIDEO RAM TO TOM AND BACK AGAIN AND WOULD BE IDEAL FOR ANY GRAPHICS PROGRAM. YOU COULD TRY IT WITH ROBERT QUINN'S HI-RES DRAWER FROM LAST ISSUE.

ROBERT HAS INCORPORATED A BLOCK MOVE ROUTINE WHICH WILL MOVE ANY HI/LO-RES SCREEN BETWEEN VIDEO RAM AND HI-MEM. THIS OPTION ALLOWS TO RECALL A SCREEN FROM HI-MEM JUST BY A KEY PRESS OR TWO.

MODIFIED CIRCUIT IS GIVEN TO MAKE IT COMPATIBLE WITH 64K RAM PACK AND VZ 200 CONSTRUCTION IDEAS. MY APOLOGIES FOR ARTICLE AS IT'S NOT AS GOOD AS I WOULD HAVE LIKED IT TO BE.

VZ 200 VEROBOARD LAYOUT IS GIVEN TOGETHER WITH PARTS LIST MISSED FROM LAST ISSUE. AGAIN MY APOLOGIES AS I FEEL I COULD HAVE PRESENTED ARTICLE MUCH BETTER. PROGRAMMING, DETAILED EXPLANATION, ETC HELD OVER FOR NEXT ISSE.

CUSTOMIZING E & F WORD PROCESSOR PRINTER MENU WAS HELD OVER AND SHOULD APPEAR IN NEXT ISSUE.

COMING ISSUES :-

ATARI TYPE JOYSTICK ADAPTOR FOR VZ 200/300 - EPROM ERASER
128K S/WAYS RAM FOR 4000H-5FFFH RANGE (DOS AREA)
AUTO START/STOP FOR DATASSETTES
34K USER RAM + 2K RAM FOR 6000H RANGE FOR VZ200

APOLOGIES - AS A RESULT OF MY CAR ACCIDENT LAST YEAR I'VE BEEN LEFT WITH CONSTANT PAINS AND HEADACHES WHICH MY JOB AS TRUCK DRIVER MAKES WORSE. I FIND IT DIFFICULT TO CONCENTRATE AND I'VE SLOWED DOWN CONSIDERABLY WITH RESULT THAT QUITE A FEW LETTERS AND REQUESTS FOR HELP HAVE BEEN UNANSWERED, SOME AWAITING A REPLY FOR MONTHS.

PLEASE ACCEPT MY APOLOGIES AND I'LL TRY TO ANSWER YOUR LETTERS/REQUESTS AS SOON AS I CAN. TO MAKE MATTERS WORSE LOCAL COMPUTER SHOW IS ON NEXT WEEK AND THERE'S LOTS TO PREPARE BEFORE THEN AND AS A RESULT JOURNALS MAY BE POSTED OUT LATE AND I HOPE YOU'LL UNDERSTAND. ALSO I'LD LIKE TO THANK YOU ONCE AGAIN FOR YOUR CONTINUED WISHES FOR MY SPEEDY RECOVERY, MUCH APPRECIATED.

CONTRIBUTIONS TO THE JOURNAL :-

MY THANKS FOR YOUR CONTINUED SUPPORT VIA YOUR CONTRIBUTIONS AND THEIR EXELLENT LAYOUT AND CONTENT. FOR A CHANGE THERE ARE SOME LEFT OVER FOR NEXT ISSUE/S. PLEASE KEEP CONTRIBUTIONS COMING AS IT MAKES MY JOB LOTS EASIER AND IT MAKES FOR GREATER VARIETY.

IF YOU'RE THINKING OF CONTRIBUTING TO THE JOURNAL THE PREFERED FORMAT IS BASIC LISTINGS, WORD PROCESSOR AND SOURCE CODE FILES ON TAPE OR DISK. FILES FROM THE FOLOWING WORDPROCESSORS CAN BE ACCEPTED :-

E & F TAPE OR DISK, WORDPRO CARTRIDGE & ALL QUICKWRITE WORDPROCESSOR FILES. ALSO TAPE OR DISK EDITOR ASSEMBLER FILES.

HUNTER VALLEY VZ USERS' GROUP CLUB MEETINGS :-
APRIL 7 - MAY 5 - JUNE 2 (ANNUAL GENERAL MEETING)

IF YOU ONLY ATTEND ONCE A YEAR THEN PLEASE COME TO JUNE MEETING AS THE CLUBS FUTURE IS IN YOUR HANDS. IT CANNOT FUNCTION WITHOUT YOUR SUPPORT.

6TH ANNUAL NEWCASTLE MICROCOMPUTING EXHIBITION - APRIL 13-15

VENUE - HUNTER INSTITUTE OF HIGHER EDUCATION - WARATAH

THE HUNTER VALLEY VZ USERS' GROUP HAS BEEN INVITED TO PARTICIPITATE AGAIN. HOPE TO SEE YOU THERE, APRIL 14 & 15 ONLY.

WANTED TO BUY - VZ 200 6K RAM BOARDS WITH OR WITHOUT 2K RAM CHIPS. NEEDED FOR FUTURE PROJECTS. - PLEASE CONTACT JOE LEON IF YOU CAN HELP OUT.

DISCLAIMER - EVERY EFFORT IS MADE TO ENSURE THE ACCURACY OF INFORMATION CONTAINED WITHIN BE IT GENERAL, TECHNICAL, PROGRAMMING, ETC. NO RESPONSIBILITY CAN BE ACCEPTED BY H.V.VZ.U.G. OR AUTHOR AS A RESULT OF APPLYING SUCH INFORMATION.

THE HUNTER VALLEY VZ JOURNAL IS SUBJECT TO COPYRIGHT AND NO MATERIAL IN THIS JOURNAL MAY BE REPRODUCED IN PART OR WHOLE WITHOUT THE CONSENT OF THE AUTHOR WHO RETAINS COPYRIGHT.

MATHS MASTERY OR MYSTERY?

One of the problems associated with computers for newcomers is an encounter with number systems other than the one we use every day. The first thing to understand is that the numbers themselves don't change, only the way in which they are represented. The symbols used, when depicting numbers are called digits, a throwback to the days, when people used to count on their fingers and toes.

Number systems are frequently identified by the number of different digits they use. Our present, widely used number system uses ten digits, 0,1,2,3,4,5,6,7,8,9 and for this reason alone, it is called a decimal number system. "deci" comes from the Latin word for "ten". Because it is based on the number 10, it is also called a base 10 number system. Having only ten digits means that to write large numbers, the digits must be reused and this results in the idea of place value. That is, a digit has a value assigned to it according to the position it occupies in a number. In the base 10 (decimal) number system, as a digit moves each place to the left, its value increases ten times.

```
Place Value    1000  100  10   1
                 7    7    7    7
```

This number is seven thousand, seven hundred and seventy-seven.

The two number systems most frequently met, when dealing with computers, are binary and hexidecimal. The first (binary) represents numbers at the level, at which the computer deals with them, whilst the second (hexidecimal) is meant to be more convenient for us to use. The word "binary" contains the prefix "bi" meaning "two", and gets its name from the fact that it uses only two digits 0 and 1. This means that even relatively small numbers can appear quite large, when we use binary to represent them. Because binary is based on 2, it is sometimes called a base 2 number system. A digit in a binary number is still assigned a value according to its position, but in this case the value of a digit increases by only 2 times as it moves each place to the left.

```
Place Value    8  4  2  1
               1  0  0  1
```

This number is read as one, zero, zero, one (base two).

(It is important to note, that 1001_2 is a binary number with a value equal to the base ten number 9 (8+1), and as such should *never* be read as one thousand and one.)

To the computer, the one and zero represent on-off states like in a switch. In an 8 bit computer, the biggest number that can be stored in a single memory location is 255. This is because an 8 bit number is one made up of 8 *binary digits* or 8 *bits*. The biggest 8 bit number would have all eight digits as ones.

```
eg.    128  64  32  16   8   4   2   1
         1   1   1   1   1   1   1   1
```

The place value of each digit is shown above it. By adding these values, (128+64+32+16+8+4+2+1), we arrive at a total of 255.

Hexidecimal, coming from "hex" meaning "six" and "deci" meaning "ten" stands for sixteen. As you might expect, given its name, the hexidecimal number system has sixteen different digits. Therefore, hexidecimal or hex, as it is frequently called, is referred to as a base 16 number system. The first ten digits, taken from the decimal number system, are the familiar 0,1,2,3,4,5,6,7,8,9, whilst the remaining six, having to be just as familiar are borrowed from our alphabet, namely the letters A,B,C,D,E and F. The value assigned to each digit in a hexidecimal number increases by 16 times as it moves each place to the left.

Place Value   4096 256   16   1

              2   4   8   6

This number is read as two, four, eight, six hex.

The main reason for using hexidecimal is that all numbers up to 255 (ie. all 8 bit numbers), can be represented by a 2 digit hex number from 00 to FF. Two byte (or 16 bit) numbers up to 65 535 can be represented by a 4 digit hex number from 0000 to FFFF. In addition, the first two digits in a 4 digit hex number represent the high (or most significant) byte, whilst the second pair of digits give the low (or least significant) byte. Such an arrangement is useful when displaying numbers on the screen, since all two byte numbers, irrespective of magnitude, occupy only four spaces. A brief comparison of how numbers are represented by the three number systems is given below.

Base	10	16	2	Base	10	16	2
	1	01	00001		9	09	01001
	2	02	00010		10	0A	01010
	3	03	00011		11	0B	01011
	4	04	00100		12	0C	01100
	5	05	00101		13	0D	01101
	6	06	00110		14	0E	01110
	7	07	00111		15	0F	01111
	8	08	01000		16	10	10000

Why bother with these other number systems? Hexidecimal is most often encountered when using disassembler or assembler programs, since screen formatting is made much simpler. Disassembling machine code programs is the means to understanding how they work and using assembly language is by far the easiest way to communicate directly with the CPU (Central Processing Unit). Without an understanding of hex, these doorways to further understanding will remain forever closed.

Binary is frequently encountered, when you begin to delve into the hardware side of the computer and start unravelling the logic circuits used. A knowledge of it is also useful, when examining the many single bit flags used in the communications area of RAM, and more importantly, when setting and resetting them by poking appropriate values into memory. The keyboard latch and the screen are both bit mapped and require some understanding of binary to enable the user to interpret them properly.

In short.....   If you pass binary by, with nary a thought.
                     Or let hex remain, a mysterious spell.
                     You'll face your machine, for years to come,
                     Exploring its secrets, but not too well.

1 X DISK DRIVE & DISK CONTROLLER - $280.00
(DISK CONTROLLER INCLUDES 2ND SOCKET WITH 8K RAM).
2 X ORIGINAL VZ TAPE DECKS - $50.00 EACH.
ORIGINAL SOFTWARE TAPES - MYSTERY PACKS - $ CALL
SOFTWARE ON DISKS - MYSTERY PACKS - 5 DISKS = $18.00
ALL PRICES INCLUDE P/P UP TO $10/$12.
1 X EXTENDED KEYBOARD (THE MICROBEE ONE) WIRED FOR VZ $40.00
(INCLUDES P/P).
1 X DUAL PRINTER BUFFER (2 X 64K UNITS IN BOX) - $400.00 -
(REQUIRES POWER SUPPLY) - EACH UNIT CAN BE UPGRADED TO 256K
INDEPENDENTLY OF THE OTHER.

FOR MORE INFO ON THIS UNIT OR ANY ABOVE PLEASE CONTACT :-

TAPEDISK SOURCE CONVERTER by Brian GREEVE

THIS PROGRAM IS INTENDED FOR THOSE PROGRAMMERS WHO MAY HAVE COPIES OF SOURCE CODE ON TAPE AND WISH TO USE THEM WITH THE LASERLINK DISK BASED EDITOR ASSEMBLER.

TO USE, THE EDITOR ASSEMBLER IS BRUN AND THE EXIT TO BASIC IS MADE (TB). BRUN "TAPEDISK" AND WAITING WILL APPEAR IN THE LOWER LEFT HAND CORNER. THIS PROGRAM WILL LOAD THE FIRST SOURCE CODE FILE IT COMES TO. ALL OTHER FILES ARE IGNORED.

FOR SIMPLICITY THERE IS NO FACILITY TO SPECIFY THE DESIRED FILE NAME BUT THIS IS IN LINE WITH THE ORIGINAL TAPE BASED EDITOR ASSEMBLER PROGRAM. WHEN THE FILE IS LOADED THE PROGRAM JUMPS BACK TO THE EDITOR ASSEMBLER WHERE THE FILE MAY BE USED, AMENDED, OR SAVED TO DISK.

THE PROGRAM IS OFFERED IN THE FORM OF A BASIC LOADER AND AS A SOURCE CODE LISTING. BEFORE YOU CAN TRANSFER YOUR SOURCE CODE FILES FROM TAPE TO DISK BASED EDITOR ASSEMBLER, THE BASIC LOADER OR SOURCE CODE LISTING MUST BE ENTERED AND SAVED TO DISK FIRST.

      BYTES FREE :- 22342 ERRORS : 00000
```

I HAVE OFTEN NEEDED THE ADDRESS OF LINES IN A BASIC PROGRAM AND I USED A MONITOR TO DO THIS UNTIL I DISCOVERED THE LIST / LLIST ROUTINE CALLS AN ADDRESS IN RAM NOT ONLY DID THE ROUTINE DO THIS BUT IT WAS VERY HELPFULL IN THAT THE REGISTERS CONTAINED VITAL INFORMATION.

```
EG. :- HL  =  LINE NUMBER ADDRESS
       BC  =  NEXT LINE ADDRESS
       DE  =  MAX. LINE NUMBER SPECIFIED
```

FROM THIS I WAS ABLE TO WRITE THE TWO PROGRAMS BELOW BOTH OF WHICH PRINT THE START ADDRESS OF THE BASIC LINES.

LISTH PRINTS IN HEX AND LISTD PRINTS IN DECIMAL.

THE ADDRESSES THAT EITHER PROGRAM PRINTS WILL NOT BE THE SAME ADDRESS AS YOU WILL GET WITH LARRY TAYLOR'S FIND ROUTINE. DON'T GET ME WRONG THE FIND ROUTINE PRINTS THE ADDRESS OF THE FIRST COMMAND IN THE LINE WHERE LISTH AND LISTD PRINTS THE ADDRESS OF THE LINE NUMBER.

WHEN LISTING WITH EITHER PROGRAM DON'T TRY TO MODIFY ANY LINE WITHOUT FIRST REMOVING THE LINE ADDRESS.

EDITORS COMMENT - WHEN TYPING IN THE LISTINGS BELOW, DO NOT TYPE IN THE 5 DIGIT DECIMAL AND 4 DIGIT HEX NUMBERS AT START OF EACH LINE. I'VE INCLUDED THEM FOR EXAMPLE ONLY. LISTD & LISTH WORKS WITH BOTH THE LIST & LLIST COMMANDS.

WRITTEN BY BOB KITCH

FOUR SUBROUTINES ARE PROVIDED THAT CAN BE CALLED FROM WITHIN ANY BASIC PROGRAM. OFTEN IT IS DESIRABLE TO BE ABLE TO PRESERVE A 2K HI-RES SCREEN SO THAT A LO-RES (TEXT) SCREEN CAN BE DISPLAYED. AFTER CERTAIN INSTRUCTIONS ARE CARRIED OUT, THE HI-RES SCREEN MAY NEED TO BE RESTORED. THE BASIC COMMANDS SET & RESET ARE MUCH TOO SLOW FOR THIS APPLICATION. THE FAST BLOCK MOVE COMMAND INHERENT IN THE Z80 IS MADE FOR THE TASK.

THE SUBROUTINES GIVEN ARE GENERAL AND RELOCATABLE FOR ANY VZ. THE BLOCK MOVE CONSTRUCT IS CALLED VIA THE USR COMMAND. THE MOVE ROUTINE IS MODIFIED DURING EXECUTION SO THAT IT IS USED AS A BLOCK FILL ROUTINE AND ALSO MOVES THE SCREEN IMAGE BOTH WAYS BETWEEN VIDEO RAM AND THE HI-MEM BUFFER.

1. SUBROUTINE 3000 - INITIALIZATION.

THIS SECTION SHOULD BE CALLED EARLY IN THE MAINLINE PROGRAM. IT LOWERS TOM, RESERVES 2400 BYTES OF HI-MEM, LOADS 14 BYTES OF MACHINE CODE AND SETS UP A NUMBER OF POINTERS. ENSURE THAT THESE VARIABLES ARE NOT RE-USED DURING PROGRAM EXECUTION.

```
MR & LR - MSB AND LSB OF STARTING ADDRESS FOR ROUTINE.
MS & LS - DITTO FOR STORAGE BUFFER.
MV & LV - DITTO FOR VIDEO RAM.
SS & SS+1 - ADDRESS FOR SOURCE.
DS & DS+1 - ADDRESS FOR DESTINATION.
ZS & ZS+1 - ADDRESS FOR LD (HL),XX BYTES.
```

THE 14 BYTES OF M/L ARE LOADED INTO THE BUFFER AND ARE FIRST SET UP AS A DESTRUCTIVE BLOCK FILL.

```
LD HL,SOURCE
LD DE,DESTINATION
LD BC,SIZE
LD (HL),CHARACTER
LDIR
RET
```

THE INITIAL COLOUR OF THE SCREEN BUFFER CAN BE SET BY ALTERING THE SECOND PIECE OF DATA LOADED IN LINE 3330. THE ADDRESSES FOR SOURCE AND DESTINATION ARE INITIALLY SET TO DUMMY VALUES OF 255D.

2. SUBROUTINE 4000 - CLEAR HI-MEM BUFFER.

THIS IS THE BLOCK FILL CALL WHICH IS ALSO NEEDED EARLY IN THE PROGRAM TO FILL THE 2K BUFFER WITH A CERTAIN CHARACTER. IT SETS UP THE USR VECTOR, POKES IN THE SOURCE AND DESTINATION ADDRESSES AND FINALLY MODIFIES THE M/L CODE TO A BLOCK MOVE TYPE.

```
LD HL,BUFFER     ;LS,MS
LD DE,BUFFER+1   ;L1,M1
LD BC,2048D
NOP
NOP
LDIR
RET
```

3. SUBROUTINE 4000 - MOVE SCREEN TO HI-MEM BUFFER.

THIS ROUTINE IS CALLED WHENEVER THE VIDEO SCREEN LOCATED FROM 7000H TO 77FFH IS TO BE MOVED INTO THE HI-MEM BUFFER. A LO-RES SCREEN CAN THEN BE DISPLAYED UNDER PROGRAM CONTROL.

```
LD HL,7000H    ;LV,MV
LD DE,BUFFER   ;LS,MS
LD BC,2048D
NOP
NOP
LDIR
RET
```

4. SUBROUTINE 5000 - MOVE HI-MEM BUFFER TO VIDEO RAM.

THIS SETS UP THE BLOCK MOVE AS SHOWN BELOW AND RESTORES THE HI-RES SCREEN THAT HAD PREVIOUSLY BEEN BUFFERED.

```
LD HL,BUFFER
LD DE,7000H
LD BC,2048D
NOP
NOP
LDIR
RET
```

WELL THAT'S ABOUT IT! GENERALLY SPEAKING, SUBROUTINES 3000 AND 4000 SHOULD BE RUN EARLY IN THE CALLING PROGRAM, AS THEY SET UP AND PRE-LOAD THE BUFFER AREA. I TRUST THAT USERS FIND THESE ROUTINES VERY USEFUL - THEY HAVE BEEN INVALUABLE WHEN WRITING GRAPHICS EDITORS.

AS A FOOTNOTE, IT IS WORTH RECORDING THE ACTION OF THE LDIR OPCODE. IT'S ACTION IS AS FOLLOWS :-

```
I/    ASSIGN (HL) TO (DE)
II/   INC HL
III/  INC DE
IV/   DEC BC
V/    REPEAT UNTIL BC=0
```

EDITORS COMMENT - WHEN TYPING IN THE BASIC LISTING DO NOT TYPE IN THE REM LINES AND COMMENTS AS THEY ARE THERE TO EXPLAIN PROGRAM OPERATION.

FRONT COVER - WHEN PICTCOPY IS RUN AND BEFORE ANY SCREEN IS LOADED FROM DISK, TRY THE GET (^) KEY. ON MY VZ 300 IT PRODUCES A CHECKER BOARD PATTERN WHICH IS REPRODUCED ON FRONT COVER. ANYBODY HAVE ANY IDEAS ON WHY THIS HAPPENS ?

MY THANKS TO ROBERT QUINN FOR INCORPORATING A BLOCK MOVE ROUTINE IN PICTCOPY FOR ME WHICH CONSISTS OF 12 BYTES WHICH ARE POKED IN INDIVIDUALLY IN LINES 1000-1020. THIS CLEVER APPROACH DOES AWAY WITH NEED FOR DATA STATEMENTS.

ROBERT ALSO POINTED OUT THAT I HAD SOME ERRORS IN PICTCOPY, ISSUE # 21, PAGE 13 WHICH HE CORRECTED.

ERROR 1) - UNRESOLVED GOSUBS IN LINE 60 WHENEVER QUIT OPTION WAS USED. THAT WAS A BIT OF SLOPPY PROGRAMMING ON MY PART.

ERROR 2) - LINE 85 SHOULD NOT BE THERE AS IT APPEARED WHEN I MERGED ROUTINES TOGETHER AND MISSED IT COMPLETELY TILL EAGLE EYED ROBERT BROUGHT IT TO MY ATTENTION.

THE ADDITION OF BLOCK MOVE MAKES PICTCOPY VERY VERSATILE ALLOWING FULL USE OF DISK FUNCTIONS WHILE RETAINING HI/LO-RES SCREEN IN MEMORY AND RECALLED JUST BY A KEY PRESS OR TWO.

I PRESUME YOU HAVE ENTERED DISK UTILITY FROM ISSUE # 21 AND ADDED PICT COPY FROM ISSUE # 22 TO WHICH YOU MUST ADD THE EXTRA LINES SHOWN ON PREVIOUS PAGE. SOME OF THE NEW LINES WILL OVERWRITE EXISTING LINES WITH SOME CHANGES TO BOTH MENUES. AND NOW TO THE ALTERATIONS/ADDITIONS AND NEW FUNCTIONS.

*) - INV - PRESSING (*) KEY WILL TOGGLE BETWEEN NORMAL AND INVERSE SCREEN.

NOTE - UPON LOADING A HI/LO-RES SCREEN FROM EITHER MENU IT WILL BE AUTOMATICALLY MOVED INTO HI-MEMORY 2K BUFFER FOR LATER RETRIEVAL. SLIDE SHOW SCREENS DO NOT GO INTO BUFFER.

^) - GET - THE (^) UP ARROW KEY WILL GET HI/LO-RES SCREEN FROM HI-MEM AND PUT IT INTO 2K VIDEO RAM WHERE IT CAN BE VIEWED, SAVED OR PRINTED OUT.

IF THE SCREEN IS DISPLAYED IN WRONG MODE, THEN USE 'Q' TO RETURN TO MENU AND PRESS MINUS (-) KEY TO SELECT CORRECT MODE. PRESSING (^) GET KEY WILL DISPLAY SCREEN IN CORRECT MODE.

S) - SAVE PICT - THIS FUNCTION WILL SAVE A HI/LO-RES SCREEN TO DISK USING FILENAME OF YOUR CHOICE. THE SCREEN CAN BE LOADED IN PREVIOUSLY FROM EITHER MENU, BUT NOT FROM SLIDE SHOW.

THIS PROGRAM IS A GOOD EXAMPLE OF USING ROUTINES AS BUILDING BLOCKS TO DESIGN A PROGRAM WITH DESIRED FUNCTIONS.

OFFER - AS THIS PROGRAM IS SPREAD OVER SEVERAL ISSUES AND IS A MERGING OF SEVERAL UTILITIES SOME READERS MAY HAVE PROBLEMS GETTING IT TO WORK PROPERLY. I CAN PROVIDE YOU WITH THE PROGRAM ON DISK TOGETHER WITH SOME HI-RES SCREENS.

COST - $4.00 - INCLUDES DISK PLUS POST & PACKING.

PLEASE READ DISCLAIMER ON BOTTOM OF PAGE 3 BEFORE ATTEMPTING PROJECT.

AS PROMISED IN LAST ISSUE, THE CHANGES PRESENTED MAKE 128K S/WAYS RAM COMPATIBLE WITH 64K RAM PACK. BEACAUSE THIS ARTICLE IS THIRD IN SERIES SPREAD OVER MANY MONTHS I DECIDED TO PRESENT MODIFIED CIRCUIT DIAGRAM COMPLETE SO NEW READERS WOULD'NT MISS OUT, ALSO PREVIOUS ERRORS HAVE BEEN FIXED UP.

WE'LL START BY HAVING A LOOK AT MODIFIED MEMORY MAP. YOU'LL NOTE BANK ZERO IS NOW AT 8000H-BFFFH AND IS FIXED AT THIS LOCATION, SAME AS 64K RAM PACK. BANKS 1-7 OCCUPY C000H-FFFFH RANGE, BUT ONLY ONE BANK AT A TIME.

UPON POWER UP OR RESET ALL O/PUTS ON IC 2 ARE FORCED LO WHICH IN TURN PRESENT 3 LO'S AT A0-A2 ON IC 3 ADDRESS INPUTS. THIS WILL MAKE Q0 LO AND Q1-Q7 HI. THE O/P'S OF IC 3 ARE TAKEN TO 3 X 2 I/P & 1 X 3 I/P AND GATES.

ONLY ONE O/P ON IC 3 CAN BE LO AT ANY ONE TIME AND A LO ON ANY AND GATE I/P WILL MAKE IT'S O/P LO THEREBY ENABLING ONE OFF THE FOUR 32K RAM CHIPS. ADDRESS 14 I/P ON THE 32K RAM CHIPS IS USED TO SELECT TOP OR BOTTOM 16K. WHEN EITHER *8000H OR *A000H GO LO, IC 4A'S O/P GOES LO ENABLING IC 5 AND ALSO SELECTING BOTTOM 16K (BANK 0) VIA ADDRESS 14 I/P ON IC 5.

NOW WHEN EITHER *C000H OR *E000H GO LO, IC 9A'S O/P GOES LO IN TURN ENABLING IC 3 WHICH IN TURN ENABLES ONE OF THE 32K RAM CHIPS DEPENDING ON BANK SELECTED. AT POWER UP OR RESET BANK 1 IS ENABLED. THE 8K CS (CHIP SELECT) SIGNALS ARE GENERATED BY A 74LS138 DECODER ON 34K SUPER II RAM BOARD, AND LIKE IC 3, ONLY ONE OF IT'S O/P'S CAN BE LO AT ANY ONE TIME.

SWITCH 1 IS NEEDED IF 128K S/WAYS RAM IS TO BE USED WITH WORDPRO CARTRIDGE. IT DISABLES ALL BANKS EXEPT FOR BANK ZERO.

THE OUT COMMAND IS USED TO SWITCH TO DESIRED BANK, IE. - OUT 112,1 TO 7

LIKE THE 64K RAM PACK, SELECTING BANK ZERO WILL IN REALITY SELECT BANK 1. BANK ZERO HAS BEEN TAKEN OUT OF THE SELECTION PROCESS USING THE OUT COMMAND VIA IC 9A & IC 4A. REFER TO THE MODIFIED TRUTH TABLE.
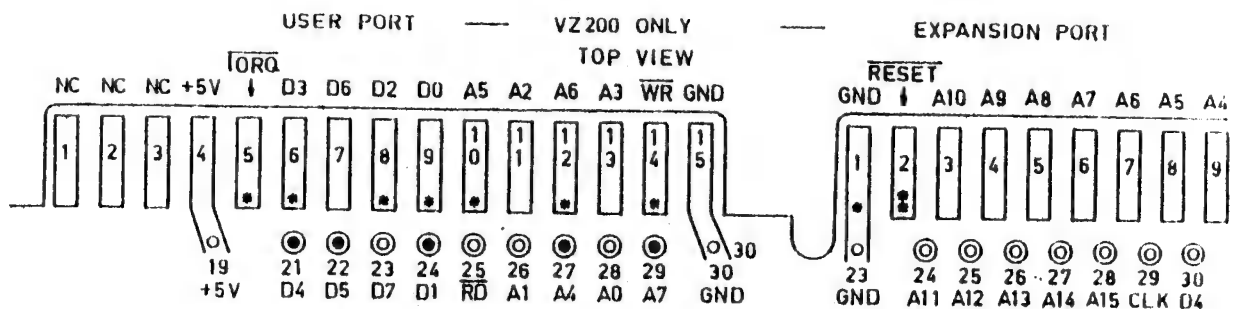

CONSTRUCTION USING ETI 687 34K RAM BOARD :-

IC 1 ON 34K RAM BOARD GENERATES 8K BLOCK CS SIGNALS WHICH ARE MARKED BY ASTERICKS ON PCB LAYOUT. THEY ARE CONNECTED TO IC 4A & IC 9A. THE O/P'S FROM IC 4B, 4C, 4D & IC 9A ARE TAKEN TO RESPECTIVE CS SIGNALS ON 34K RAM BOARD. OF COURSE THE LINK WIRES ARE NOT USED ANY MORE. 32K RAM CHIPS HAVE TWO ADDITIONAL ADDRESS LINES OVER 8K CHIPS WHICH ARE A13 & A14. BEND ALL A13, PINS 26 & A14, PINS 1 UP 90 DEG. BEFORE INSERTING INTO SOCKETS.

CONNECT ALL PINS 26 TOGETHER USING LINK WIRE AND CONNECT TO A13 WHICH IS SHOWN ON PINOUT BESIDES THE 34K RAM BOARD LAYOUT. A14 PINS ON 32K RAM CHIPS ARE CONNECTED AS SHOWN ON CIRCUIT AND NOT TO A14 ON ADDRESS BUS.

FIVE IC'S ARE USED FOR CONTROLLING CIRCUITRY AND COULD BE CONSTRUCTED ON PIECE OF VEROBOARD. THE REQUIRED SIGNALS COULD BE TAKEN FROM THE 30 PIN SOCKET ON 34K RAM BOARD OR FROM USER PORT WHOSE PINOUT APPEARS ON PAGE 16. IF USING USER PORT THEN MACHINE INSERT SOCKET STRIPS COULD BE SOLDERED TO IT. SINGLE STRAND SHIELDED WIRE CAN THEN BE USED TO PLUG INTO STRIP WITHOUT SOLDERING AND IN CASE OF WIRING ERRORS EASILY RECTIFIED.

NOTE - YOU CAN START WITH ONE 32K RAM CHIP AND ADD OTHERS AS NEED ARISES, BUT YOU HAVE TO PLACE THEM IN THE FOLLOWING ORDER - IC 5, 6, 7 & 8.

NOTE FOR DISK USERS - ANY ATTEMT TO USE BANKS 2 TO 7 WILL RESET THE DOS BECAUSE OF THE DOS COMMUNICATION REGION AT TOP OF BANK 1.

PLEASE READ DISCLAIMER ON BOTTOM OFF PAGE 3 BEFORE ATTEMPTING THIS PROJECT.

NOTE - VZ SUPER GRAPHICS ISSUE # 22 - THE PARTS LIST FOR SUPER GRAPHICS WAS ACCIDENTALLY LEFT OUT AND IS REPRODUCED HERE FOR BOTH VZ 200 & VZ 300.

    1 X 74LS138   1 X 74LS174   1 X 6264 8K RAM   2 X 6K8 RESISTORS
    1 X 0.1 CERAMIC OR MONOLITHIC CAPACITOR
    1 X 24 PIN M/I (MACHINE INSERT) SOCKET
    1 X 32-50 PIN M/I SOCKET STRIP (VZ 200).
    1 X 32 PIN M/I ADAPTOR STRIP
    1 X 40 PIN M/I SOCKET (VZ 300)
    1 X 40 WAY IDC FLAT RIBBON CABLE DIL PLUG (VZ 300).
    1 X MINIATURE PUSH BUTTON SWITCH
   19 X 15CM (6") LENGHTS OF INSULATED HOOK UP WIRE
    1 PIECE OF VEROBOARD 17 HOLES ACCROSS BY 19 TRACKS DOWN (VZ 300).
    1 PIECE OF VEROBOARD 16 HOLES ACCROSS BY 25 TRACKS DOWN (VZ 200).

NOTE - ON PAGE 16, TOP RIGHT ARE DEPICTED M/I (MACHINE INSERT) ADAPTOR STRIP, M/I SOCKET STRIP & 24 PIN M/I SOCKET.

PREPARING VZ 200 - FIRST TAKE VZ CASE APART AND REMOVE CIRCUIT BOARD FROM CASE. NEXT REMOVE RF SHIELD BY UNSOLDERING IT FROM PCB.

6116 - UNSOLDER 2K VIDEO RAM OR CUT PINS ON ONE SIDE AND LEVER BACK AND FORTH TILL PINS BREAK ON OTHER SIDE. REMOVE PIN STUBS AND INSPECT BOARD FOR DAMAGE AND REPAIR IF NEEDED. NEXT SOLDER A 24 PIN M/I SOCKET IN 6116'S PLACE.

6847 (VDG) - REMOVE TWO SCREWS ON COLOUR VIDEO BOARD AND LIFT BOARD UP OUT OF ROAD SO YOU HAVE ACCESS TO 6847. USING SMALL SIDECUTTERS CUT THE FOLLOWING PINS AS CLOSE TO THE PCB AS POSSIBLE AND BEND UP 90 DEG. CUT PINS 27, 29 & 30 ON 6847 AND BEND UP 90 DEG. DO NOT FORGET TO REMOVE PIN STUBS FROM PCB.

PREPARING VZ 200 PLUG IN MODULE :-

VEROBOARD - THE TRACKS RUN HORIZONTALLY, FROM LEFT TO RIGHT. OPEN AND SOLID CIRCLES DENOTE USED HOLES ON VEROBOARD. VERTICAL LINES DENOTE INSULATED LINK WIRES. HORIZONTAL LINES SIMPLY DENOTE USED TRACKS AND ARE SHOWN FOR CLARITY ONLY. THE (X'S) DENOTE CUT TRACKS.

    USING AN 1/8" (3MM) DRILL BIT CUT TRACKS MARKED WITH AN (X) CHECKING AND DOUBLE CHECKING ALL ARE CORRECT AND HAVE'NT MISSED ANY. NEXT ISERT ALL LINK WIRES. PLEASE NOTE LINK WIRE UNDER 6264, PIN 26 HAVE TWO WIRE LINK ENDS GOING INTO SAME HOLE.

    MOUNT THE RESISTOR ON THE LEFT NEXT. THE RESISTOR SHOWN UNDER 6264 IC IS MOUNTED UNDER THE BOARD WITH ONE END SHARING HOLE WITH LINK WIRE. BE CAREFULL NOT TO SHORT OUT TRACKS UNDERNEATH.

M/I ADAPTOR STRIP - THIS IS A DOUBLE SIDED SINGLE ROW OF PINS WHICH CAN BE SNAPPED TO DESIRED LENGTH. ONE SIDE HAS THINNER PINS THAN OTHER SIDE. SNAP TWO LENGTHS OF 12 PINS EACH. INSERT THE STRIPS IN THE 24 PIN RAM SOCKET WITH THINNER PINS AT BOTTOM.

    NEXT PUT VEROBOARD ON TOP OF PINS AND LOWER DOWN ON THEM. LIFT V/BOARD UP TILL IT JUST CLEARS COMPONENTS ON PCB AND MARK HEIGTH ON PINS. REMOVE PINS FROM SOCKET AND SOLDER THICK PINS TO V/BOARD TO MARKED HEIGTH AND CUT ALL PINS ON LEFT STRIP FLUSH WITH TOP OF V/BOARD.

    THE RIGHT ADAPTOR STRIP NEED NOT BE CUT FLUSH AS A LINK WIRE IS SOLDERED TO ONE PIN. THE TWO STRIPS ON V/BOARD LAYOUT MARKED WITH SOLID CIRCLES IS WHERE THE ADAPTOR STRIPS ARE SOLDERED TO.

BEFORE PROCEEDING FURTHER TRY PLUGGING IN MODULE INTO 2K VIDEO RAM SOCKET TO CHECK IF IT PLUGS IN PROPERLY AND CLEARS ALL COMPONENTS AND REMOVE. USING NO SOCKETS SOLDER THE 74LS174, 74LS138 & 6264 IC'S IN NEXT MAKING SURE THE IC'S ARE SOLDERED IN RIGHT WAY ROUND. USING THE V/BOARD LAYOUT AS A GUIDE SOLDER ALL 19 OFF BOARD LINK WIRES.

USING BIT OF THIN CARDBOARD LIKE FROM BACK OF WRITING PAD CUT A PIECE BIT LARGER THAN V/BOARD. CUT TWO SLOTS FOR THE TWO ADAPTOR STRIPS TO GO THROUGH AND INSERT C/BOARD UNDER BOARD WHICH IS USED TO INSULATE BOTTOM OF V/BOARD FROM COMPONENTS IN VZ.

PLUG IN MODULE IN VACANT 2K VIDEO RAM SOCKET AND SOLDER THE 5 WIRES TO 6847 FIRST WHICH ARE DENOTED BY ASTERICKS. PINS 20 & 21 ON PCB ARE NOT CONNECTED TO ANYTHING AND FOR THAT REASON THEY DO NOT HAVE TO BE CUT AND CAN BE SOLDERED TO DIRECT.

THE REST OF THE WIRES CAN BE SOLDERED DIRECTLY TO FINGERS ON USER PORT. IF YOU CAN GET SINGLE STRAND SHIELDED WIRE THEN YOU COULD SOLDER ONE END TO MODULE AND SOLDER M/I SOCKET STRIPS TO USER PORT AND PLUGGING OTHER END INTO STRIP. THIS APPROACH SAVES A LOT OF SOLDERING AND IN CASE OF WIRING ERRORS ARE SIMPLY RECTIFIED. THE USER PORT PINOUT IS MARKED BY ASTERICKS FOR SIGNALS NEEDED BY MODULE.

THE SAME APPROACH CAN BE USED ON 6847 BY SOLDERING M/I SOCKET STRIP/S TO PINS 20, 21, 27, 29 & 30 AND PLUGGING WIRES INTO THEM.

NOTE - IF YOUR VZ 200 HAS AN ETI 687 34K RAM BOARD INSTALLED THEN ONE CORNER OFF IT'S PCB WILL HAVE TO BE CUT AWAY SO MODULE CAN BE PLUGGED IN.

RESET BUTTON - SOLDER 2 WIDE M/I SOCKET TO PINS 1 & 2 ON EXPANSION PORT AND THEN SOLDER TWO LENGTHS OF WIRE TO PB SWITCH AND OTHER ENDS TO ANOTHER 2 WIDE M/I SOCKET. THIS GIVES YOU A PLUG IN RESET BUTTON. YOU COULD MOUNT RESET BUTTON ON BOTTOM RIGHT LIP OF CASE ABOVE POWER SWITCH.

IF YOUR WORK CHECKS OUT OK THEN REASSEMBLE VZ. THE RF SHIELD COULD BE LEFT OFF UNLESS YOU LIVE NEAR A POWER STATION. IN THAT CASE CUT HOLE IN SHIELD IF MODULE TOO HIGH AND RESOLDER TO PCB.

WHENEVER YOU POWER UP OR RESET THE VZ TYPE IN OUT 32,8 AND PRESS RETURN OR YOU'LL END UP WITH ONLY 1K (1024 BYTES) FOR HI-RES SCREENS. IT'S A GOOD IDEA TO INCLUDE AN OUT 32,8 AT START IN ALL YOUR PROGRAMS.

TESTING - REFER TO ISSUE # 22

CAPTURING HI/LO-RES SCREENS :-

WITH SUPER GRAPHICS AND RESET BUTTON INSTALLED IN YOUR VZ IT BECOMES A SIMPLE MATTER TO CAPTURE ANY HI/LO-RES SCREEN FROM ANY PROGRAM. SIMPLY LOAD YOUR PROGRAM INTO MIDDLE PAGE USING FOLLOWING METHOD :-

OUT32,25:MODE(1):BRUN"INVADERS"

WHAT WE HAVE DONE IS TO SELECT PAGE 1 (MIDDLE PAGE), GRAPHICS MODE(6) AND THEN RUN PROGRAM. IT'S IMPORTANT TO DO IT AS DESCRIBED ABOVE BECAUSE ONCE YOU SELECT PAGE 1 YOU CAN'T SEE WHAT YOU'RE ENTERING ON SCREEN. ONCE YOUR PROGRAM HAS LOADED IT WILL BE DISPLAYED IN PAGE 1, BUT WON'T LOOK NORMAL.

PRESS RESET BUTTON WHEN DESIRED SCREEN APPEARS. THE VZ WILL BE RESET AND AS WILL BE VIDEO RAM TO PAGE 0. DESIRED SCREEN WILL BE SAFE AND SOUND IN PAGE ONE. IN NEXT ISSUE I'LL DESCRIBE HOW IT CAN BE RETRIEVED FROM PAGE 1.

1 X CASIO FX-702 P PROGRAMMABLE (IN BASIC) CALCULATOR
1 X CASIO FA-2 CASSETTE INTERFACE
1 X CASIO FP-10 PRINTER & 8 ROLLS OF PAPER

CALCULATOR ONLY ON SECOND SET OF BATTERIES AND PRINTER USED ONLY 2 ROLLS OF PAPER. CASSETTE INTERFACE USED ONLY FOR SHORT TIME AS BOUGHT VZ WITH PRINTER, ETC. ALL HAND BOOKS ARE INCLUDED AS SUPPLIED.

PRICE - $150.00 PLUS POSTAGE - WILL NOT SEPERATE

CONTACT NEVILLE HUGHES AT 4 BINYA ST. WHITTON 2705

     YOU CAN SEE MATTHEW AT CLUB MEETINGS FOR A DEMONSTRATION OR PURCHASE OF SCREEN ED.

E & F WORD PROCESSOR PATCH 3.3

THIS LATEST PATCH WRITTEN BY DAVE MITCHELL WILL CONVERT YOUR E & F TAPE WORD PROCESSOR FOR FULL DISK USE WHILE RETAINING ALL TAPE FUNCTIONS. BELOW ARE THE DISK COMMANDS & ADDED FUNCTIONS :-

LOAD, SAVE, ERASE, RENAME, DIRECTORY, INITIALIZE, UPDATE, DRIVE 1 & 2, SHIFTLOCK & IMBEDDED PRINTER CONTROL CODES

PATCH 3.3 HAS PROVISION FOR IMBEDDING PRINTER CONTROL CODES IN TEXT AND FAST SAVING AND LOADING OF TEXT DATA TO AND FROM DISK USING BLOCK SAVE/LOAD TECHNIQUES.

MINIMUM MEMORY REQUIREMENTS :-
VZ 300 + 16K RAM PACK - VZ 200 + 26K

PATCH 3.3 IS COPYRIGHT TO AND ONLY AVAILABLE FROM :-
HUNTER VALLEY VZ USERS' GROUP   P.O.BOX 161 JESMOND 2299
N.S.W. AUSTRALIA - Phone (049) 51 2756

PRICE - AUS/NZ AU$20.00 - UPDATE - AUS-$10.00 - NZ-AU$11.00.
UPDATING AVAILABLE ONLY TO PREVIOUS PURCHASERS OF OUR PATCHES.

FOR MORE INFORMATION WRITE TO H.V.VZ.U.G. ENCLOSING A SSAE.

FOR PRIVATE SALE

EXTENDED DOS V1.3 -$15.00

THE PREVIOUS VERSION HAS BEEN UPDATED WITH EXTRA COMMANDS ADDED.

OLD COMMANDS - MERGE, DIRA, LDIRA, DIRB, LDIRB, OLD, OLD., DEC, HEX, STATUSA AND LSTATUSA. STATUSA AND LSTATUSA ALSO WORKS WITH VERSION 1.0 DOS.

NEW COMMANDS :-
MENU - LOADS AND RUNS BINARY OR TEXT MENU PROGRAM FROM DISK.
CODE - SIMPLIFIES USING PRINTER CONTROL CODES DIRECTLY OR FROM WITHIN A PROGRAM.
LTAB - IS FOR SETTING OF LEFT MARGIN.
MOVE - MOVES BASIC FILE FROM DISK TO CHOSEN MEMORY ADDRESS.
UPD - ERASES OLD FILE AND SAVES WITH SAME FILE NAME.

MENU/FILE COPIER/DISK ORGANIZER - $15.00

THIS UTILITY WILL READ YOUR DISK DIRECTORY AND PRESENT YOU WITH SEVERAL OPTIONS. USING THE CURSOR YOU CAN RUN/BRUN ANY PROGRAM OR SELECT FILE COPY, REN, ERASE, DRIVE 1 OR 2, ETC. BESIDES COPYING TEXT AND BINARY FILES ALL OTHER FILES CAN BE COPIED AS WELL EXEPT FOR DATA FILES.
